

Mountain View, Ca – 2006 March 24. Ergodex and Fry's Electronics today announced that Fry's is carrying the Ergodex DX1 in each of Fry's 34 locations around the United States. Fry's is the leading retailer for the electronics and computing enthusiast. "Fry's is the place where a technical customer can shop with confidence and comfort," said Larry Kelly, CEO of Ergodex. "Fry's delivers leading edge products representing the latest trends and advances to Hi-Tech Professionals. And now, professionals and enthusiasts can see, touch and experience the DX1 at a location that is close and convenient to them."

The DX1 introduces movable, programmable keys. The product, which consists of a pad, a removable tray and 25 movable keys, is poised to radically alter the ways in which people interact with their computers. With the DX1 Input System, users can place Ergodex Keys anywhere on a 7x9 tray and assign those Keys simple and multi key macros. Users can configure their input systems to conform to the particular size and shape of their hands and cluster their Ergodex Keys in functional groups.

DX1 – Movable Programmable Keys

The DX1 system allows users to change Key functions as their needs change. Ergodex Keys have no wires or batteries. And because they have an adhesive surface, Keys can be repositioned whenever desired. The ability to constantly reassign and reposition Keys delivers users the ultimate in flexibility. As users' needs change, they can change their input systems.

The DX1 connects to PCs via a USB cable and supports Windows 2000 and XP Windows operating systems. In the future, Ergodex technology will also support Linux and the MAC OS X.

Initial customers for the DX1 Input System include PC gamers, graphics artists, video and audio editors and engineering and CAD users. The Ergodex technology is particularly important when performing complex repetitive tasks.

The DX1's simple yet powerful software coupled with its groundbreaking hardware advancements make it a necessary piece of equipment for any consumer looking to gain greater control of his or her computer. Just as useful in PhotoShop or Word as in today's high speed games, those who can afford the DX1 should buy it without reservation.

To experience this new technology first hand, go to a Fry's store (shop4.frys.com/ac/storelocator/index.jsp), visit Fry's online at www.frys.com, or visit Ergodex at www.ergodex.com .

About Ergodex

Founded in 2000, Ergodex is a leader in providing people with dramatically improved ways of interacting with computers and other intelligent equipment. Headquarterd in Mountain View, CA, the company is privately held. The company's name is based on two Latin words: *Ergo* (therefore) and *dexter* (right side, dexterity). Ergodex technology helps people gain the upper hand in controlling increasingly complex programs and software. Ergodex Sensor Platform (ESP) technology is the next logical step in the keyboard-mouse continuum, allowing people to interact with computers in ways that are more intuitive, dynamic and powerful. Ergodex, DX1, and Ergodex Sensor Platform are trademarks of Ergodex.
